(54) HOUSING DEVICE FOR DISK-SHAPED RECORDING CARRIER

(57)Abstract:

PROBLEM TO BE SOLVED: To efficiently house a large number of disk-shaped recording carriers and to enable an integrally layered state and a divided state.

SOLUTION: An uppermost stage stocker member 101 and stocker members 100 are formed with dividing projections 111 to line up in a common position on their side parts respectively. Under the state of a backstop 107 of a dividing slide member 105 lowered underneath one of the dividing projections 111, feed screws 80, 81 and 82 are rotated to lift up the uppermost stage stocker member 101. The stocker members 100 between the stocker member 100 and the uppermost stage stocker member 101, formed with the dividing projections 111 to be supported underneath by the backstop 107 are also pulled up, so that the stocker can be divided. Plural CD mounting pawls are erected on the lower surface side of the individual stocker members 100 and the uppermost stage stocker member 101, and are capable of holding a CD respectively.
